(CONTENTS CONTINUED)

Component and morphology biases on quantifying the composition of nanoparticles using single-particle mass spectrometry
L. Zhou, A. Rai and M.R. Zachariah (USA) **104**

Aerosol MALDI of peptides and proteins in an ion trap mass spectrometer: Trapping, resolution and signal-to-noise
W.A. Harris, P.T.A. Reilly and W.B. Whitten (USA) **113**

A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter
B.W. LaFranchi and G.A. Petrucci (USA) **120**

The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1
N.M. Eleghasim, A.E. Haddrell, S. van Eeden and G.R. Agnes (Canada) **134**

Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study
X. Qin and K.A. Prather (USA) **142**

Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS
K.-P. Hinz, N. Erdmann, C. Grüning and B. Spengler (Germany, Italy) **151**

Author index **167**

Subject index **168**

Subject index Volume 258

ac trap levitation
The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1, 134
Aerodynamic lens
An experimental study of nanoparticle focusing with aerodynamic lenses, 30
Aerodynamic properties
Mass spectrometric analysis and aerodynamic properties of various types of combustion-related aerosol particles, 37
Aerosol
Aerosol mass spectrometry: An introductory review, 2
Cross flow ion mobility spectrometry: Theory and initial prototype testing, 13
Airborne nanoparticle characterization with a digital ion trap–reflectron time of flight mass spectrometer, 50
Investigating the chemical composition of mixed organic–inorganic particles by "soft" vacuum ultraviolet photoionization: The reaction of ozone with anthracene on sodium chloride particles, 74
Aerosol MALDI of peptides and proteins in an ion trap mass spectrometer: Trapping, resolution and signal-to-noise, 113
Aerosol chemistry
Mass spectrometric analysis and aerodynamic properties of various types of combustion-related aerosol particles, 37
Aerosol mass spectrometry
Particle analysis by laser mass spectrometry (PALMS) studies of ice nuclei and other low number density particles, 21
Mass spectrometric analysis and aerodynamic properties of various types of combustion-related aerosol particles, 37
A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter, 120
Anthracene
Investigating the chemical composition of mixed organic–inorganic particles by "soft" vacuum ultraviolet photoionization: The reaction of ozone with anthracene on sodium chloride particles, 74
Atmospheric aerosol
Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS, 151
ATOFMS
An on-line aerosol laser mass spectrometer with three, easily interchangeable laser based ionisation methods for characterisation of inorganic and aromatic compounds on particles, 86

Biomass
Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study, 142

Chemical composition
Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS, 151
Chemical ionization
Reactions and mass spectra of complex particles using Aerosol CIMS, 95
Cigarette smoke
Reactions and mass spectra of complex particles using Aerosol CIMS, 95
Clustering algorithm
Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS, 151
Combustion aerosol
Mass spectrometric analysis and aerodynamic properties of various types of combustion-related aerosol particles, 37

Data classification
SpectraMiner, an interactive data mining and visualization software for single particle mass spectroscopy: A laboratory test case, 58
Data visualization
SpectraMiner, an interactive data mining and visualization software for single particle mass spectroscopy: A laboratory test case, 58
Digital ion trap
Airborne nanoparticle characterization with a digital ion trap–reflectron time of flight mass spectrometer, 50

Electrospray
An experimental study of nanoparticle focusing with aerodynamic lenses, 30

Focusing
An experimental study of nanoparticle focusing with aerodynamic lenses, 30
Fog
Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study, 142

Heterogeneous reaction
Investigating the chemical composition of mixed organic–inorganic particles by "soft" vacuum ultraviolet photoionization: The reaction of ozone with anthracene on sodium chloride particles, 74
HULIS
Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study, 142

ICAM-1
The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1, 134
Ice nuclei
Particle analysis by laser mass spectrometry (PALMS) studies of ice nuclei and other low number density particles, 21
Inflammation potential
The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1, 134
Inorganic compounds
The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1, 134

doi:10.1016/S1387-3806(06)00483-0

Instrument
Aerosol mass spectrometry: An introductory review, 2
Ion mobility spectrometry
Cross flow ion mobility spectrometry: Theory and initial prototype testing, 13
Ion trap
Aerosol MALDI of peptides and proteins in an ion trap mass spectrometer: Trapping, resolution and signal-to-noise, 113

Laser desorption/ionization
Particle analysis by laser mass spectrometry (PALMS) studies of ice nuclei and other low number density particles, 21
Limonene
Reactions and mass spectra of complex particles using Aerosol CIMS, 95

MALDI
Aerosol MALDI of peptides and proteins in an ion trap mass spectrometer: Trapping, resolution and signal-to-noise, 113
Mass spectrometry
Aerosol mass spectrometry: An introductory review, 2
Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study, 142
Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS, 151
Morphology and component bias
Component and morphology biases on quantifying the composition of nanoparticles using single-particle mass spectrometry, 104

Nanoparticle
An experimental study of nanoparticle focusing with aerodynamic lenses, 30
Airborne nanoparticle characterization with a digital ion trap–reflectron time of flight mass spectrometer, 50
Component and morphology biases on quantifying the composition of nanoparticles using single-particle mass spectrometry, 104

Oleic acid
Reactions and mass spectra of complex particles using Aerosol CIMS, 95
Organic aerosol
Reactions and mass spectra of complex particles using Aerosol CIMS, 95
A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter, 120
Organic carbon
Impact of biomass emissions on particle chemistry during the California Regional Particulate Air Quality Study, 142
Ozone
Investigating the chemical composition of mixed organic–inorganic particles by "soft" vacuum ultraviolet photoionization: The reaction of ozone with anthracene on sodium chloride particles, 74

PAH
An on-line aerosol laser mass spectrometer with three, easily interchangeable laser based ionisation methods for characterisation of inorganic and aromatic compounds on particles, 86
Particle beam
An experimental study of nanoparticle focusing with aerodynamic lenses, 30
Particulate matter
The preparation of <100 particles per trial having the same mole fraction of 12 inorganic compounds at diameters of 6.8, 3.8, or 2.6 μm followed by their deposition onto human lung cells (A549) with measurement of the relative downstream differential expression of ICAM-1, 134
Photoelectron emission
A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter, 120
Photoelectron resonance capture ionization
A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter, 120

Real time
Aerosol MALDI of peptides and proteins in an ion trap mass spectrometer: Trapping, resolution and signal-to-noise, 113
REMPI
An on-line aerosol laser mass spectrometer with three, easily interchangeable laser based ionisation methods for characterisation of inorganic and aromatic compounds on particles, 86
Retene
An on-line aerosol laser mass spectrometer with three, easily interchangeable laser based ionisation methods for characterisation of inorganic and aromatic compounds on particles, 86
Review
Aerosol mass spectrometry: An introductory review, 2

Single particle analysis
Comparative parallel characterization of particle populations with two mass spectrometric systems LAMPAS 2 and SPASS, 151
Single particle laser ablation
Airborne nanoparticle characterization with a digital ion trap–reflectron time of flight mass spectrometer, 50
Single particle mass spectrometer
SpectraMiner, an interactive data mining and visualization software for single particle mass spectroscopy: A laboratory test case, 58
Single photon ionization
Investigating the chemical composition of mixed organic–inorganic particles by "soft" vacuum ultraviolet photoionization: The reaction of ozone with anthracene on sodium chloride particles, 74
Single-particle mass spectrometry
Component and morphology biases on quantifying the composition of nanoparticles using single-particle mass spectrometry, 104
Soft ionization
A comprehensive characterization of photoelectron resonance capture ionization aerosol mass spectrometry for the quantitative and qualitative analysis of organic particulate matter, 120

Thermal desorption
An on-line aerosol laser mass spectrometer with three, easily interchangeable laser based ionisation methods for characterisation of inorganic and aromatic compounds on particles, 86
Transmission efficiency
An experimental study of nanoparticle focusing with aerodynamic lenses, 30

Wood smoke
Reactions and mass spectra of complex particles using Aerosol CIMS, 95
